

FOR IMMEDIATE RELEASE 29 September 2015

IN THIS ISSUE: Armada De Chile Awards Vulcanair a contract to supply seven (7) P68 Observer aircraft specially configured for five different missions.

On September 25th 2015, the Comptroller of the Chilean Army (Directemar) approved a contract for the supply of seven (7) Vulcanair P68 Observer 2 aircraft. The flexible and easily reconfigurable Vulcanair P68 Observer 2 will be deployed for several missions including: Search and Rescue, Maritime Police, Search and Reconnaissance, Medical Evacuation and Transport.

The aircraft will specifically be configured with special mission equipment, including an AIS for the identification of the ships, and an Infrared camera and other critical mission equipment.

The aircraft will be delivered during the course of 2016-2017.

The aircraft choice was based on the excellent value and flexibility of the P68 Observer 2 aircraft. The aircraft can safely operate over the water thanks to its twin-engine configuration. The P68 Observer 2 has a unique plexiglas nose providing a "helicopter-like" visibility. Its long-range capabilities were paramount in the aircraft choice. In fact some of the required missions require flying for up to 800 nautical miles.

"At Vulcanair we are pleased that Directemar selected our excellent surveillance aircraft. Vulcanair Aircraft are gaining momentum in the surveillance and aerial works arenas thanks to the excellent qualities of the aircraft, the extremely competitive pricing, and thanks to the excellent after sales support provided by Vulcanair." Says Remo De Feo CEO of Vulcanair Aircraft.

About Vulcan Air:

Building on nearly 60 years of aviation design heritage, Vulcanair Aircraft is a privately owned Certified General Aviation manufacturer based in Italy and selling handcrafted aircraft globally. Respected for its innovative and reliable aircraft designs and exceptional customer service, Vulcanair's products and product improvements are entirely developed "in house" by Vulcanair Design and Engineering department, whose goal is to smartly blend new technologies design techniques to proven construction methods to General Aviation. All of this to offer distinctive, good-flying, good-looking, robust, aircraft.

Vulcanair S.p.A. aircraft are already successfully operated by several government entities, including the German Police (Frankfurt), the Italian State Police, The Tunisian Police, the U.S. Department of the Interior and several U.S. States, The Bahamas Defence Force.
